

# Package ‘MethylSeqData’

October 17, 2024

**Title** Collection of Public DNA Methylation Sequencing Datasets

**Version** 1.14.0

**Date** 2020-10-25

**Description** Base-level (i.e. cytosine-level) counts for a collection of public bisulfite-seq datasets (e.g., WGBS and RRBS), provided as SummarizedExperiment objects with sample- and base-level metadata.

**License** CC0

**NeedsCompilation** no

**Depends** SummarizedExperiment

**Imports** ExperimentHub, HDF5Array, rhdf5, GenomeInfoDb, S4Vectors, GenomicRanges, stats, IRanges, utils

**Suggests** BiocFileCache, BiocStyle, data.table, knitr, rmarkdown

**VignetteBuilder** knitr

**Encoding** UTF-8

**biocViews** ExperimentHub, ExperimentData, SequencingData, Homo\_sapiens\_Data, Mus\_musculus\_Data, MethylSeqData

**BuildResaveData** no

**RoxygenNote** 7.1.1

**git\_url** <https://git.bioconductor.org/packages/MethylSeqData>

**git\_branch** RELEASE\_3\_19

**git\_last\_commit** 1d48b42

**git\_last\_commit\_date** 2024-04-30

**Repository** Bioconductor 3.19

**Date/Publication** 2024-10-17

**Author** Peter Hickey [aut, cre]

**Maintainer** Peter Hickey <peter.hickey@gmail.com>

ChenMammaryData	<i>Obtain the Chen mammary data</i>
-----------------	-------------------------------------

---

### Description

Obtain the mouse mammary reduced representation bisulfite sequencing (RRBS) data from Chen et al. (2017).

### Usage

```
ChenMammaryData(HDF5Array = TRUE)
```

### Arguments

HDF5Array	Logical scalar indicating whether the assays should be returned as <a href="#">HDF5Array</a> objects or as ordinary <a href="#">matrix</a> objects.
-----------	---

### Details

The data consists of RRBS methylation profiles of epithelial populations from the mouse mammary gland, with  $n = 2$  biological replicates for each of three cell populations. The dataset contains unstranded CpG loci and the counts have not been aggregated by strand.

Column metadata include:

- `Sample` The sample ID
- `Population` The epithelial population ID
- `Description` The description of the epithelial population

If `HDF5Array = TRUE` then the each assay is returned as a [HDF5Array](#) object. Each [HDF5Array](#) occupies approximately 2 Kib in memory. If `HDF5Array = FALSE` then the each assay is returned as an ordinary [matrix](#) objects. Each matrix occupies approximately 81 MiB in memory.

All data are downloaded from ExperimentHub and cached for local re-use. Specific resources can be retrieved by searching for `MethylSeqdata/chen_mammary`.

### Value

A [SummarizedExperiment](#) object with assays containing a matrix of methylated read counts (M) and a matrix of unmethylated read counts (U).

**Examples**

```
se <- ChenMammaryData()
```

---

listDatasets	<i>List all available datasets</i>
--------------	------------------------------------

---

**Description**

Summary information for all available datasets in the **MethylSeqData** package.

**Usage**

```
listDatasets()
```

**Details**

A study may contribute multiple datasets if they cannot be reasonably combined (e.g., different sets methylation loci or different species). The reported number of samples refers only to the dataset as it is stored in **MethylSeqData**; this may be different to the number of samples used by the authors in their analysis, e.g., due to filtering.

**Value**

A **DataFrame** where each row corresponds to a dataset, containing the fields:

- Reference, a Markdown-formatted citation to scripts/ref.bib in the **MethylSeqData** installation directory.
- Taxonomy, an identifier for the organism.
- Part, the part of the organism being studied.
- Number, the total number of samples in the dataset.
- Call, the relevant R call required to construct the dataset.

**Author(s)**

Peter Hickey

**Examples**

```
listDatasets()
```

---

RizzardiHickeyBrain *Obtain the Rizzardi/Hickey brain data*

---

**Description**

Obtain the human brain nuclei whole genome bisulfite sequencing (WGBS) data from Rizzardi, Hickey, et al. (2019).

**Usage**

```
RizzardiHickeyBrain(
  context = c("CpG", "CpA", "CpT"),
  strand = c("*", "+", "-"),
  HDF5Array = TRUE
)
```

**Arguments**

context	A string specifying the context of the methylation loci to be obtained.
strand	A string specifying the strand of the methylation loci to be obtained.
HDF5Array	Logical scalar indicating whether the assays should be returned as <a href="#">HDF5Array</a> objects or as ordinary <a href="#">matrix</a> objects.

**Details**

The data consists of WGBS methylation profiles of neuronal, non-neuronal, and unsorted nuclei populations from four different regions of the human brain, with  $n = 4 - 9$  biological replicates for each condition (i.e. the combination of nuclei population and brain region).

Column metadata include:

- donor The donor ID
- neuron The nuclei population as determined using fluorescence-activated nuclear sorting based on the neuronal marker NeuN
  - "pos" Neuronal (NeuN+) nuclei
  - "neg" Non-neuronal (NeuN-) nuclei
  - "unsorted" Unsorted nuclei (i.e. including both neuronal (NeuN+) and non-neuronal (NeuN-) nuclei in unknown proportions).
- tissue The brain region
  - "BA9" Brodmann area 9 (part of the frontal cortex)
  - "BA24" Brodmann area 9 (part of the anterior cingulate)
  - "HC" Hippocampus

- "NAcc" Nucleus accumbens

The majority of donors were matched between sorted and unsorted populations, but not all.

Separate datasets are provided for five sets of methylation loci:

- CpGs (context = "CpG") aggregated across strands (and thus unstranded, strand = "\*")
- CpAs (context = "CpA") on the forward strand (strand = "+")
- CpAs (context = "CpA") on the reverse strand (strand = "-")
- CpTs (context = "CpT") on the forward strand (strand = "+")
- CpTs (context = "CpT") on the reverse strand (strand = "-")

Data from the unsorted nuclei are not available for the CpA or CpT datasets.

If HDF5Array = TRUE then the each assay is returned as a [HDF5Array](#) object. Each [HDF5Array](#) occupies approximately 2 KB in memory. If HDF5Array = FALSE then the each assay is returned as an ordinary [matrix](#) objects. Each matrix occupies approximately 6 – 33 GiB in memory (smaller for CpG, larger for CpA and CpT).

All data are downloaded from ExperimentHub and cached for local re-use. Specific resources can be retrieved by searching for `MethylSeqdata/rizzardi_hickey_brain`.

### Value

A [SummarizedExperiment](#) object with assays containing a matrix of methylated read counts (M) and a matrix of total read counts (Cov).
